

Advanced Reporting Module

for EMC-Captiva

An Operational Reporting Tool providing graphical and data reports designed to assist in the management of work and staff.

Key Features

- User Friendly Graphical and Detail Reports
- Process Segregation for Departmental and Usage Reports
- User Productivity Reports
- Ingestion Reports
- Data Exports to native Excel format for further analysis or distribution

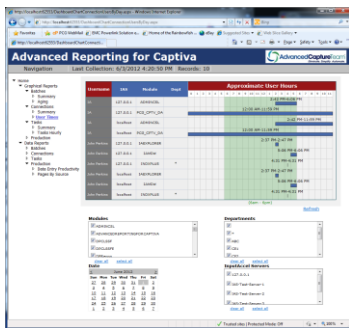

Overview

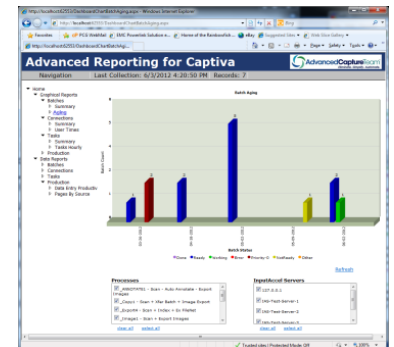

Summary Reports show Batches by Status, Connected Modules, and Tasks by Module and Status filterable by Processes and InputAccel Server. Quickly allows identification of:

- Existence of Troubled batches
- Modules are on-line
- Task bottlenecks

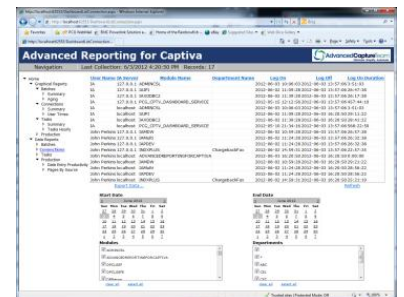

Batch Aging Report displays Batches counts by Creation Date and Current Status. Quickly identifies Batches which are failing or risk failing their SLA.

User time sheet reports displaying log on and off time of users by server, module and department. This allows for staff management and hour verification.

Data Reports for batches, users, connections, tasks and productivity which are sortable, filterable and exportable to Excel.

Plus more.
